FreedomFlyer Product Overview
Fictional concept for the CAP 931 capstone

FreedomFlyer offers electric luxury Class B motorhomes with zero tailpipe emissions and an expandable solar system designed to support beautiful advantures!

Intended customers:
Tech-forward professionals, remote workers, and travelers seeking luxury camper-van experiences.

Proposed design:
- Electric propulsion.
- A long-wheelbase Chevrolet BrightDrop-based conversion.
- Roof-mounted solar supplemented by three solar-covered awnings.
- A flexible interior for travel, relaxation, and remote work.

All features are proposed design targets. Engineering feasibility, range, solar output, battery integration, pricing, and availability have not been validated.

This document describes the fictional product. It does not establish facts about Sunshine State RVs or competing manufacturers.
